

Rapid Fire Knock Down

- KilFire absorbs oxygen extinguishing the fire rapidly
- KilFire can withstand very high temperature without evaporation
- Immediate cooling effect on target area
- Apply directly to active fire
- Apply as a retardant to contain running fire
- No reigniting
- Smoke and toxic fumes dramatically reduced
- NRA Approved
- Not required to be registered as a chemical
- Aids in vegetation re-growth

An all-in-one powder or liquid to extinguish and retard fires
Liquid fire break & mopping up

*Caution Important Note: Not to be used when extinguishing electrical fires.

KILFIRE

LIQUIDS & POWDERS

Bushfire Grade • Environmentally Beneficial • Non Toxic Formula

Starves Fire from Oxygen and Extinguishes Immediately
Saving Valuable Time, Water and Lives

KILFIRE RTU
2 Litre Liquid
Including ready to use hose connection

KILFIRE RTU
1 Litre Liquid
Including ready to use hose connection

Commercial Strength Pro Liquid
1 Litre Liquid

Commercial Strength Pro Liquid
2 Litre Liquid

KILFIRE DIY Shotpack
500mL Commercial Strength Liquid
Including Ready to Use Professional Trigger and Hose Connection

KILFIRE DIY Shotpack
500mL Commercial Strength Liquid Refill

FE 10: 10x9L Fire Extinguisher Additives

KS 6: 6x16L Knapsack Additives

KS 2: 2x16L Knapsack Additives

KILFIRE NEW EAZY MIX POWDER

Available in the following sizes:

- 130g: Add to 400 litres of water
- 165g: Add to 500 litres of water
- 200g: Add to 600 litres of water
- 265g: Add to 800 litres of water
- 330g: Add to 1000 litres of water

- **KILFIRE POWDER & LIQUID** has proven itself to be a **SHIELD** against intense temperatures when fighting fire. Using as a cone or fan-shaped flow from the pressure of the nozzle spray, the rapid knock down rate **ILLUMINATES** fire, causing the reduction in smoke inhalation that could **SAVE LIVES** and prevent the destruction of property.
- **KILFIRE** is in its twelfth year of manufacture and continued supply to the **Commercial, Industrial, Mining, Government and Retail Sectors.**
- **KILFIRE** has been accepted way beyond its initial approval criteria because of its non-chemical formulation (NRA Canberra Australia). Because **KILFIRE** is proven to be non-toxic and benign, it does not fall into the same category as a toxic chemical product.
- **KILFIRE** is above the standard of the original request of the West Australian Fire Brigade, the National Registration Authority and complies with Australian Standards requirements together with many other government acceptances, issued letters together with a statement of certification declaring "No Certificate of Chemical Registration is Required" making it safe for Commercial, Industrial and Retail use.
- The **KILFIRE** Manufactured Formulation is a *highly concentrate and sophisticated soil conditioner* that can be exported and accepted in most countries worldwide. It is perfect for lawns and gardens after the expiry date or remaining residue is to be disposed of.
- **KILFIRE** can be transported as a water additive mixture: 1000/1 (Liquid) or 3000/1 (Powder) in potable water trucks. Safety is always the best policy, wash out and rinse tank before refilling with potable water.
- **KILFIRE** works effectively and safely by creating a reaction that cuts the oxygen supply, cutting the fire's fuel supply.
- **KILFIRE** powder or liquid concentrate added to and expanded in the required amount of water can withstand very high temperatures without evaporation and has an immediate cooling effect in the target area. By applying **KILFIRE** directly on an active fire, or using as a retardant to contain a running fire, the result is the same – the fire has been extinguished with the benefit of no reigniting or ignition danger, smoke and toxic fume dispersion is dramatically ceased.
