

DROUGHTEX

AGRAYIELD

FREQUENTLY ASKED QUESTIONS »

What is it?

The Droughtex Agrayield is a natural soil enhancer, manufactured and blended from restructured polymers, specially designed to substitute the replacement of/or improve the natural oil levels in soil.

What does it do?

Enhances germination and generates the growth of root length and mass in broad acre farming, assist in drought by absorbing the moisture from cold air, rain or flood irrigation while preventing evaporation to combat water shortage or drought.

How is it applied?

Droughtex-Agrayield in a broad acre application is applied at a rate of 5 Litres in 75 to 100 litres of water per treated hectare. Spot or row application such as Corn for example is also extremely cost effective.

What does it cost?

Bulk cost of Agrayield is \$20-00 per litre (\$100-00 + GST per Treated hectare).

Why use it?

- **Less stress on the crop between low or minimal rainfall.**
- **Saves up to 75% fertiliser as it is held under the surface to use by the plant.**
- **Increased yields of up to 86% with minimal or no rust.**
- **Massive water savings on irrigated sites.**
- **Application can be prior to crop preparation or after.**
- **Increased root mass to gain more available nutrient.**

- Can be applied as late as early to mid August (WA).
- Increased earthworm activity,
- Improved quality meadow hay or straw.
- Suitable for Wheat, Barley, Canola and Oats.
- Tip:- A sulphate based fertiliser is even more compatible and recommended. ([Go to printable brochure for](#)) :-
