

Ultra-Soil Yellow – Blue

Water- Soil Technology

Commercial Growers, Orchards, Golf Courses

Turf/Lawn, Trees, Vines & Domestic Gardeners

Race Courses, Parks & Gardens, Shale Tracks & Sand.

Ultra-Soil YELLOW

SOIL AND CLAY BREAKER & CONDITIONER

LIQUID OR GRANULE

Environmentally safe soil treatment, high concentrated to cover very large areas, allows water to penetration beyond the depth of Lawn, Plants, Vines and Trees, allowing the soil to breath, absorb cold air/Moisture, rain or misting, creating a dramatic cut back in water wastage.

The same application will also assist in minimizing fertilizer, preventing runoff, water pollution in streams and rivers, with a result in water and fertilizer saving.

Ultra-Soil YELLOW allows roots to grow deeper, creating a stronger, healthier plant, with the added benefit of opening up the soil and allowing available water to carry fertilizer into the soil.

Even the largest of trees can fall over if their root system is not deep enough, which can be a danger in public parks and asset loss.

2.

Ultra- Soil YELLOW is a water pollution solution. It is the latest water saving and soil technology and is very different to using detergent based products or discarded washing water that is still used by some, this is adding to the ground water pollution and creating a poor soil environment.

Not only will **Ultra- Soil YELLOW** act as a conditioner to your soil, but will soil hydration, reduce surface evaporation, assisting in reduction of up to 7 times the fertilizer required, with a lesser amount of fertilizer ameliorating as a membrane substitute creating natural soil conditions as/would the natural oils in the soil that may have been depleted .

Turn your water shortage around to excess water storage.

Golf Courses ,Parks and Gardens, Gardeners, Vineries, Growers and Developers are currently experiencing a dramatic change from previous water runoff or having to over fertilize with a result of a serious water shortage,

Eliminate the possibility of having your business closed down such as a low water allocation or restriction where flood irrigation is used.

Ultra- Soil YELLOW used at a rate of 20 to 25 mls per square meter can also be used for de - watering, when water is held on soil above the water table.

Ultra-Soil Blue

WATER RETENTION & CONDITIONER

LIQUID OR GRANULE

An environmentally benign water retention product designed to increase the water holding capacity by its unique ability to hold water deep within the soil profile either by conventional watering or absorbing moisture from the cold night air, on sunrise it locks off and prevents evaporation, this has been seen to save 80% to 90% of your water bill, and use far less fertilizer.

NOTE: In low water penetrating soils (Hydrophobic soil) use **Ultra- Soil YELLOW** to open up and condition the soil to accept **Ultra- Soil Blue**

Ultra- Soil Blue is the latest in water and soil technology range of product! Water Retention/Conditioner for your soil and forms a cohesive bond with the particles increasing the retention of moisture and nutrients, significantly required of leaching soil.

This water retention product is an extension of **Ultra- Soil YELLOW** and very concentrated and covers a large area per litre and travels down through the soil from a surface application requiring no transplanting.

3.

Ultra- Soil Blue, water retainer does not flush through to the water table as such, it eliminates nutrient flushing and increases the plants resistance to drought stress, tops up by the absorption of cold air-dew and sealing itself off to prevent evaporation retaining a warm damp climate to promote healthier seed germination and at the same time decrease the soil surface temperature, dramatically reducing water quantity and manual watering time.

Without correct attention to your soil, you are wasting large amounts of water and unnecessary fertilizers. This natural soil conditioner product saves you huge amounts of would be otherwise wasted water, with the added bonus of healthier plant protection assisting in obtaining a higher yield.

Once you choose and apply either **Ultra- Soil YELLOW** or **Ultra- Soil Blue** your soil will have a lower evaporation rate, allowing it to Drain or wet/damp warm atmosphere that is ideal for germination and plant growth and reduce the ground temperature in hot climates. With the added bonus of reducing plant stress, healthier plants resulting in higher yields, Thus creating a top soil membrane layer acting as natural oils in the soil would, promoting healthy well conditioned soils, potting mixes and growing mediums to wet or arid climates.

Availability:-

1&2 Litre RTU (12mm to 19mm (½ to ¾ inch) Std Garden Hose connection
4 Litre, 10 Litre, 20 Litre & 200Litre

Usage Rates:-

Yellow or Blue Liquid: 1 Litre

(Aust) Treats 330 to 660 Square Meters (U.S. A) approx 4,000 to 8,000 Square Feet

Yellow or Blue Granule: Per 1 Kg

(Aust) Treats 100 to 200 Square Meters (U.S.A) approx 1,000 to 2,000 Square Feet

4.

Application Liquid :

Connect the one or two litre RTU to a ½ or ¾ inch garden hose, remove top double pin and fill or cover side hole (Some RTU'S don't have side holes) with pin or finger and apply to selected area or hydrophobic area, wait 24 hours and apply required water for seepage.

Application granule:

Simply sprinkle between 5 grams (1 heaped teaspoon) to 10. 5 square meters (U.S. = 0.35 oz for 10 square feet) over the surface root area of tree or plant. Initial watering preferably light or mist, wait 1 hour, then water as required.
